CDNA cloning using adult mouse brains and Northern blotting
identified 2 truncated versions, MDK1 T1 (W03422) and MDK1 T2
(W03423), of the novel mouse developmental kinase 1 (MDK1) (see also
W03421), a new member of the eck/eph family of receptor tyrosine
kinases. Their amino acid sequences were deduced from cDNA clones
(T32961 and T32962) obtd. from adult mouse brains. MDK T1 and T2
each possess the entire ectodomain, the transmembrane domain and
part of the juxtamembrane region of MDK1, but lack the catalytic
tyrosine kinase domain. They can be used to screen for potential
agents useful for treatment of diseases characterised by abnormal
signal transduction.

Its amino acid sequence was deduced from a cDNA clone (T32960) isolated from mouse embryo and adult brain libraries. The distinct patterns of MDRI expression during mouse development suggest an important role for MDRI in the formation of neuronal structures. MDRI may be obtd. by expression in host cells. It can be used in methods for the diagnosis of diseases characterised by abnormality in a signal transduction pathway, such as neuroproliferative or neurodegenerative disorders or cancer, to screen for (ant)agonists, and to raise antibodies.                Claim 18; Page 71-75; 133pp; English.

4 Novel human EPH-11ke receptor protein tyrosine kinases, HEK5, HEK7, HEK8 and HEK11 (R85089-92), respectively, were identified following isolation of their encoding cDNAs (T02946-49) from a human foetal brain cDNA library. HEK7 and HEK8 show extensive homology to the catalytic domain of chicken EPH-11ke receptors Cek5, Cek7 and Cek8. HEK11 shows no homology to any known EPH-11ke receptor. Recombinant HEK receptors (or their soluble extracellular domains) are produced by
                                                                                                                                                              New nucleic acid encoding EPH-like receptor tyrosine kinase(s) and related vectors, host cells, proteins, antibodies etc., us diagnostically and therapeutically to modulate receptor activa

A cDNA clone encoding a novel variant of EPH-related PTK Cek5+ (290657), was isolated from a chick embryo library lambda gtl1. Cek5+ protein (R75709) contains a 16-amino insertion in the juxtamembrane domain, and be a result of alternative splicing. Cek5+ is exclusively expressed in sequence 1011 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eph-related Cek5+; Eph;

TISSUE SPECIFICITY: WITHIN THE NERVOUS SYSTEM, EXPRESSION IS
RESTRICTED TO PROSONERES I AND 2 IN THE DIENCEPHALON AND ALL THE
RHOMBOMERES IN THE HINDBRAIN DURING SEGMENTATION STAGES, LATER ON,
A SUPERIMPOSED PATTERN APPEARS THAT CORRELATES WITH THE FORMATION
OF SEVERAL AXONAL TRACTS. IN THE SOMITIC MESODERM, THE EXPRESSION
CORRELATES WITH SEGMENTATION AND THE GUIDANCE OF BOTH NEURAL CREST
AND MOTOR AXONS THROUGH THE SCLEROTOMES.
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC
POWART OF THE PROTEIN TRACTS IN THE CATALYTIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOMAIN.                                                         PROTEIN TYROSINE PHOSPHATE.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
TISSUE SPECIFICITY: RESTRICTED TO LYMPHOID TUMOR CELL LIN
SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATA
DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      VNLLDSKTIQGELGWISYPSHG

CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

ALTERNATIVE PRODUCTS: A NUMBER OF VARIANTS ARE PRODUCED B ALTERNATIVE SPLICING.

SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATA DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.

SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: RECEPTOR FOR MEMBERS EPHRIN-A1, -A2, -A3, -A4 AND -A

Elk-like receptor tyrosine kinase in brain.";

Neuroscience 63:163-178(1994).

-i- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. E

EPHRIN-A1, -A2, -A3, -A4 AND -A5.

-i- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP +

PROTEIN TYROSINE PHOSPHATE.

-i- SUBCELIULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i- SUBCELIULAR LOCATION: TYPE I MEMBRANE PROTEIN.

Oncogene 8:1807-1813(1993).

-I- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY.

EPHRIN-A1, -A4 AND -A5. BINDS MORE POORLY TO EPHRIN-A2

-I- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP +

PROTEIN TYROSINE PHOSPHATE.

-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I- SUBCLEARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAIN.

-I- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CA

DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
                                                                           This SWI

"CDNA cloning and tissue distribution of five human EPH-like receptoreDNA cloning and tissue distribution of five human EPH-like receptor FOR Lines.";

Oncogene 10:897-905(1995).

-!- FUNCTION: RECEPTOR FOR MEMBERS OF THE EPHRIN-A FAMILY. BINDS TO EPHRIN-A1, -44 AND -45. BINDS MORE POORLY TO EPHRIN-A2 AND A-3.

-!- CAPALYJIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP +

PROTEIN TYROSINE PHOSPHATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        _HUMAN

SUBGELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SIMILARTY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC DOMAIN. BELONGS TO THE EPHRIN RECEPTOR FAMILY.
SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS.

               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
